

features

- Multi Protocol
- Modular concept
- Simple, robust design
- Intuitive to use
- Easy to maintain
- Easy to expand
- Easy to network
- Easy to install
- Easy to configure

The ZX5e is an intelligent fire alarm control panel. It has been designed and is constructed around proven and reliable microprocessor technology. This simple approach has produced a modular, scalable fire alarm platform suitable for protecting all types of premises.

The ZX5e control panel supports a total of five industry leading protocols, allowing fire detection devices to be independently selected based on performance or aesthetic appeal. The ZX series control panels seamlessly integrates with Apollo (Xplorer, XP95 & Discovery), Hochiki ESP, Nittan, Morley-IAS and System Sensor detection device protocols.

Designed for maximum flexibility the ZX5e control panel is supported by a complete suite of peripherals and software tools. Information on the location of fires, faults and system status can easily be displayed or printed in multiple locations. Integration to Voice Evacuation Systems, paging systems and third party control systems is supported through a range of peripheral interface units.

This adaptability, support and intelligence means that the ZX5e is suitable for new projects, system

expansions, retrofits and system upgrades in all application areas. Offices, industrial units, multi-storey buildings, entertainment venues, industrial plants and hospitals are a few of the many applications that can benefit from the features of the ZX5e intelligent multi-protocol fire alarm control panel.

system

The ZX5e control panel forms the heart of the fire detection system. A steel enclosure contains all the required components - microprocessor, power supply plus a clear LCD (Liquid Crystal Display), system status indicators and the control buttons that are the user interface.

A quick glance enables users to assess the condition of the fire alarm system. Alarm and Fault conditions are highlighted by LEDs and supported by enhanced text descriptions on the LCD display. Clearly labeled buttons allow users to quickly manipulate the system providing both audible and tactile feedback of successful operations.

Accidental operation is prevented by user passcodes that are required to gain access to functions. Basic functions (Evacuate, Reset, Mute, Accept, Silence) are available at one access level whilst more advanced operations are protected by a secondary level passcode. Individual device isolations, test modes and configuration data are all protected by these secondary access levels.

Inside each control panel the microprocessor maintains a log of the events or actions occurring on the system. Fires, Faults, tested devices and diagnostics are all electronically logged for future reference. Remote (or local) printers can easily be connected to provide a paper copy of events as and when they occur or provide a historical record.

The control panel can be configured to support any one of the five detection protocols by installing the correct loop driver cards in the control panel. For each loop the control panel will support a total up to 126 devices using Apollo, Hochiki or Nittan protocols and up to a maximum of 99 sensors and 99 modules (call points, monitor, control, conventional zone modules and addressable sounders) using the Morley-IAS or System Sensor protocols.

The flexibility of the ZX5e design allows the control panel to be connected to a wide variety of peripheral devices. From display repeaters to custom mimic displays, printers, serial data interfaces and switching relay interfaces.

installation

The initial installation of the system is aided by sophisticated features like AUTOLEARN. An internal routine that will automatically detect all the devices on the detection and peripheral loops saving the time of entering all the devices individually.

Basic programming is also configured during the Autolearn process resulting in only fine tuning of the system being required to complete the system configuration.

An off-line Windows™ configuration tool is available to further enhance the process, making text entry and specific device programming easier. Complex cause and effects programming

is simplified through clearly designed user interfaces. Once completed the configuration of the panel can be saved for future reference. Enhanced features allow the complete archiving of the control panel history log and a Virtual Panel Interface enables all control commands to be entered using the computer.

maintenance

The ZX5e intelligent fire alarm control panel has been designed to help with the normal operation of a fire detection system. Standard weekly testing is available through a simple menu structure allowing selection of the zones to be tested and the optional activation of the outputs or ringing of the sounders.

The status of individual devices can be analysed to determine whether cleaning or replacement is required. This information can either be viewed directly on the LCD, printed for reference or viewed from remote locations using Fire 6 enhanced software.

As the installation grows the ZX5e can expand with the installation, adding additional devices, loop cards, printers, display repeaters or interface devices. If the installation becomes too big for a ZX5e, additional ZX2e or ZX5e control panels can simply be added by networking using two or more control panels together.

networking

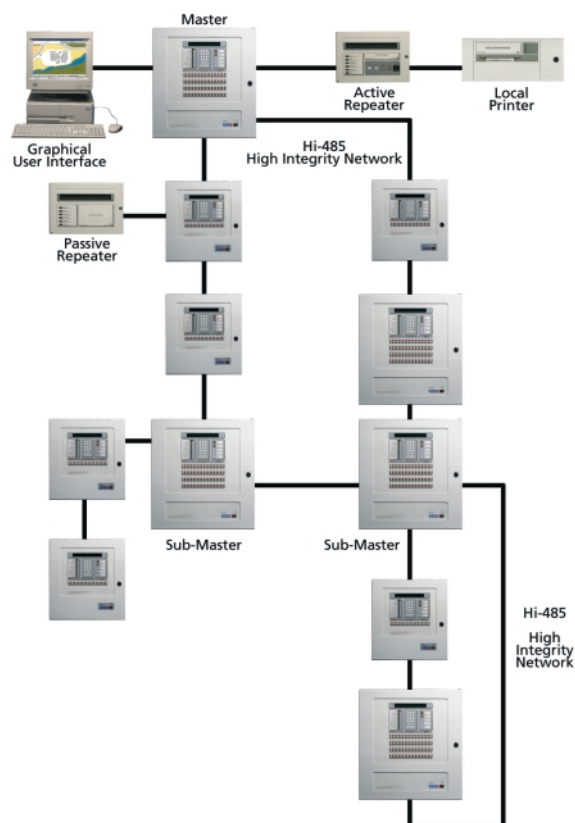

The Morley-IAS network is unique. A clever protocol allows for the propagation and distribution of all messages and control signalling. A robust protocol that can be used over long distances, even on MICC, mineral based fire resistant cabling. The ZX5e can be networked with other ZX series control panels using Master/Slave architecture. Up to a maximum of 99 control panels can be networked together using the standard control panel operating system.

The network can be configured in two ways:

For single sites or large buildings the networking is normally configured as one large system. Each

networked control panel shares information. Alarms and communications are reported to each individual display.

If the fire alarm system is to provide cover for multiple buildings or multiple sites it is normally configured to operate in a report and control mode. The fire alarm panels act individually or as sub-systems only reporting information to the master on the level above.

specification

Operating Voltage: 230V 50Hz ac
(+10%, -15% voltage tolerance)

Max. PSU Rating: 3.25 Amps total, comprising:
Battery Charger: 1.0 Amps
Internal & External Loads: 2.25 Amps

Note - Remember to use loop and battery calculator to check system and battery loading.

Standby Batteries: 24V sealed lead acid batteries
Minimum Capacity: 2x 12V 12Ah (internally fitted)
Maximum Capacity: 2x 12V 25Ah (internally fitted)

Power Supply:
Input(s): 24V and 7Vac
(from integral mains transformer)
Output(s): 24Vdc nominal (25.5 - 20.0Vdc)

Dimensions (mm): 500 x 500 x 195 (H x W x D)

Weight: 19.0 kg without batteries
38.2 kg with 2x 25Ah batteries

Environmental Operating Limits:
Temperature: 0°C to +40°C
Humidity: 85% non-condensing (maximum)

Construction: Sheet steel painted, sealed to IP30

Cable Entry: 24 x 20mm knock-outs in top of cabinet
24 x 20mm knock-outs in bottom of cabinet

Loop Capacity: 1 to 5 loops expandable

Apollo, Nittan and Hochiki Protocols:
Max. 126 devices (detectors and modules) per loop
Morley-IAS and System Sensor Protocols:
Max. 99 sensor and 99 module addresses per loop

Note : Multiple sensor protocols cannot be used in the panel simultaneously.

Zones: Up to 20 zones with individual LED indicators. Expandable to 40 or 80 individual LED indicators. A maximum 200 can be programmed with up to 120 software zones with no LED indication.

Internal Sounder: Intermittent buzzer (fault condition)
High-pitched continuous buzzer (fire condition)

External Outputs:
Sounder Outputs: 4 programmable outputs. Open and short circuit monitoring. 1A maximum per output.

Auxiliary Relays: EN54 format at 1 fault relay and 1 programmable relay voltage free, changeover outputs Contacts rated at 24V ac/dc, 1A, 0.6 pF maximum.

User Controls: MUTE, ACCEPT, SILENCE/RESOUND, SOUND ALARMS & RESET

Programming Controls: Alphanumeric multi-level keypad with 15 keys and 3 control keys:
✓ (YES), X (CANCEL/ESC), and (ENTER)

LED type general panel status indicators:
FIRE, FAULT, ACCEPTED, DISABLEMENT, TEST, SOUNDER FAULT, DELAYED MODE, RELAYS DISABLED, EARTH FAULT, SYSTEM/CPU FAULT, SOUNDERS DISABLED, ALARMS SILENCED, SUPPLY FAULT, POWER.

LED type zone Indicators (for 20 zones):
FIRE, FAULT/TEST/DISABLED

Display: 2x40-character LCD alphanumeric display with back-light.

Serial Interface: 3 serial ports with connections for optional RS485 or RS232 plug-in communication cards.

Networking: Maximum 99 panels can be networked using a Master Network and connected Sub-Networks.

795-077-060 60 Zone LED Display Indicator Card
795-051-001 Internal Printer

797-062 ZX5e Bezel Kt
797-064 ZX5e Glass Door Kit

795-082 Engineer's Software Programming Kit, including Fire 6.
795-080 Programming Interface lead.
796-081-001 Fire 6 Enhanced Feature Set Software Key.

795-014 4 way programmable relay module, pcb only.

795-015 4 way programmable sounder module, pcb only.

795-029 8 way programmable input module, pcb only.

795-038-001 Hi-485 communication module, pcb only.
795-065 40 way programmable mimic interface module, pcb only.

709-601-001 ZXr-A Active Repeater. LCD, System Status indicators and user controls for Silence, Reset, Mute, Accept, Self-test and Evacuate all activated by a key switch.

709-701-001 ZXr-B Passive Repeater. LCD and system status indicators.

020-600-002 Bezel Kit for ZXr Repeaters.

795-060-002 External remote printer module.
795-057 MODBUS interface unit.

795-067-001 Paging system interface module.
Suitable for SCOPE, ASCOM/TELENOVA.
